

CLASSROOM SCAN INSTRUCTION SHEET

Before you arrive for the training:

- For the *Classroom Scan* learning activity, please make a short video of your classroom prior to the training and bring it with you.
- You can use a digital camera, tablet, smartphone, or other recording device that allows to you to share the video with others.
- To make your video, scan the classroom with a 360-degree view. Move through the classroom in a pattern that makes the most sense, based on how your room is organized.

The goal is to show how your centers are arranged and placed, where your classroom materials are placed and used, and the posters, pictures, and other visual supports you have in your classroom.

You and the other training participants will share your classroom videos with each other. The videos will help you identify and learn from the environmental supports you're already using in your classroom, as well as those being used by your peers.
